<p>Module Aims أهداف المادة الدراسية</p>	<p>This module will give students a thorough introduction to the fundamental principles of fluid mechanics and deal with engineering applications of inviscid and viscous flow.</p> <p>On completion of this module, students should be able to:</p> <ol style="list-style-type: none">1. Understand the fundamental principles of fluid statics and fluid flow, with consideration of both ideal (inviscid) and real (viscous) flow.2. Compute basic parameters for hydrostatic fluid problems, including forces on submerged bodies.3. Analyse ideal fluid flow in one- and two-dimensions using the continuum concepts of conservation of mass, momentum and energy.4. Knowledge and understanding of viscous flow with application to boundary layers, pipe flow, flow around bodies, lubrication and other application areas.5. Identify appropriate methodologies for modelling flows using non-dimensional parameters.6. Describe the operation of turbomachinery for incompressible flow, including the dynamics of centrifugal pumps.7. Recognise and simply describe the complex nature of turbulent flow.
<p>Module Learning Outcomes مخرجات التعلم للمادة الدراسية</p>	<ol style="list-style-type: none">1. Understand how to convert the unit system from British to SI. unit or vice versa.2. Training the students how to solve the problems associated with fluid mechanics.3. Measure the fluid flow of liquids by different types of flow meters.4. Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering types of simple experiments involving some sampling activities that are interesting to the students

	F – Fail	راسب	0-44	Considerable amount of work required

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.
